

Notched Semi-Rigid Ureteroscope

Description

This technology incorporates a modification in the ureteroscope that allows the easy cannulation of the ureteral orifice. Using this technology, the urologist will be able to engage the previously placed safety guide wire and use it to easily track into and through the ureter.

Features/Benefits

- Notch on ureteroscope tip enhances ability to cannulate the ureter, saving time and minimizing complications
- Ability to track along entire length of guide wire facilitates navigation of tortuous ureter

Technology and IP Status

- A working prototype is available for testing
- US patent pending US2006/0270905
